

Advantages and Disadvantages

Advantages

1. **Easy Property Search:** Users can quickly search rental properties based on title or location.
2. **Secure User Authentication:** JWT authentication and bcrypt password encryption provide secure login and user data protection.
3. **Online Property Booking:** Users can book rental properties directly through the application without manual paperwork.
4. **Responsive User Interface:** The React.js frontend provides a smooth experience on desktops, tablets, and mobile devices.
5. **Efficient Data Management:** MongoDB Atlas securely stores user, property, and booking information.
6. **Admin Property Management:** Administrators can easily add, update, and delete property listings.
7. **Fast Performance:** RESTful APIs and the MERN Stack ensure efficient communication between the frontend and backend.
8. **Scalable Architecture:** The modular MERN architecture allows new features to be added easily in future versions.

Disadvantages

1. **No Online Payment:** The application does not support online payment gateways such as Razorpay or Stripe.
2. **Limited Search Filters:** Users can search only by title or location; advanced filters (price, property type, etc.) are not available.
3. **Basic Admin Features:** The admin panel provides only basic property management functionality.
4. **No Email Notifications:** Booking confirmations and account notifications are not sent via email.
5. **No Property Image Upload:** Property images are currently static and cannot be uploaded dynamically by the administrator.

6. **Internet Dependency:** Users need an active internet connection to access the application.
7. **No Real-Time Availability Updates:** Property availability is not updated in real time when multiple users access the system simultaneously.
8. **Limited User Features:** Features such as wishlist, reviews, ratings, and chat between owner and tenant are not implemented.
