Customer Problem Statement Template:

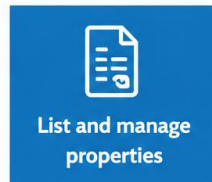

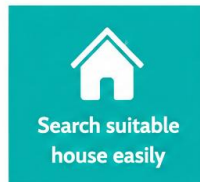

Create a problem statement after understanding the customer's point of view. The Customer Problem Statement Template helps identify the real challenges faced by tenants, house owners, and administrators in the house rental process.

A well-defined problem statement provides a clear direction for developing an effective solution. Through research and user analysis, the team identified common issues such as difficulty in finding verified rental properties, managing property listings, handling bookings, and maintaining secure user information. HouseHunt aims to address these challenges by providing a centralized, secure, and user-friendly platform that simplifies the complete house rental experience.

I am	Tenants / House Owners / Administrators
I'm trying to	Find / List / Manage / Verify and Book rental houses efficiently
But	The current methods (offline visits, phone calls, brokers, paper records) are time-consuming, unorganized, and error-prone
Because	There is no centralized system to search properties, manage listings, handle bookings, and maintain user and payment information
Which makes me feel	Frustrated, insecure, and dissatisfied
So I can	Use a secure, easy-to-use online platform to manage rentals smoothly and transparently

Examples:

Persona (Customer/Role)	I am (Customer)	I'm trying to	But	Because	Which makes me feel	So I can
Tenant	Tenant (Looking for a house)	Find a suitable house for rent	Information is scattered and hard to trust	No centralized platform with verified listings	Frustrated and waste time	Easily find and book the right house
House Owner	House Owner (Listing my property)	List and manage my rental property	Manual process is time-consuming	No proper system to manage inquiries and bookings	Overwhelmed and insecure	Manage property and tenants efficiently
Administrator	Administrator (Managing system)	Monitor users, listings and transactions	Lack of centralized control and reports	Data is disconnected and unorganized	Difficult to track and manage	Maintain system security and transparency
