

User Acceptance Testing (UAT)

Date: 13 July 2026

Team ID: SWTID-2026-7371

Project Name: House Rent

Project Overview:

Project Description

The House Rent Management System is a full-stack web application developed using the MERN Stack (MongoDB, Express.js, React.js, and Node.js). It allows users to register and log in securely, browse available rental properties, search properties by title or location, view detailed property information, and book rental houses online. Administrators can manage property listings through dedicated management features. The application uses JWT authentication, MongoDB Atlas for database management, and provides a responsive user interface for a smooth user experience.

Project Version: v1.0.0

Testing Period: 08/07/2026 to 13/07/2026

Testing Scope:

- User Registration
- User Login
- Browse Properties
- Search Properties
- View Property Details
- Book Rental Property
- Admin Property Management
- JWT Authentication
- Database Connectivity

Requirements to be Tested:

- As a user, I want to register with my details.
- As a registered user, I want to log in securely.
- As a user, I want to browse available rental properties.
- As a user, I want to search properties using title or location.

- As a user, I want to view complete property details.
- As a user, I want to book a rental property.
- As an administrator, I want to add, update, and delete property listings.
- The system should securely store and retrieve data from MongoDB Atlas.

Testing Environment:

- URL / Location
<http://localhost:5173>

Credentials (if required)

User

Email : swathi@gmail.com

Password : 123456

Admin

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Status
TC-001	User Registration	Register with valid details	User registered successfully	Registration successful	Pass
TC-002	User Login	Login with valid credentials	Login successful	Login successful	Pass
TC-003	Browse Properties	Open Properties page	All properties displayed	Properties loaded correctly	Pass
TC-004	Search Property	Search by title/location	Matching properties displayed	Search working correctly	Pass
TC-005	View Property Details	Click View Details	Property details displayed	Details loaded correctly	Pass
TC-006	Book Property	Click Book Now and submit booking	Booking successful Booking created	Booking created successfully	Pass
TC-007	Add Property (Admin)	Add new property	Property added	Added successfully	Pass
TC-008	Update Property	Edit property details	Property updated	Updated successfully	Pass

TC-009	Delete Property	Delete property	Property removed	Deleted successfully	Pass
TC-010	Logout	Click Logout	User logged out	Logout successful	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Search results not updating properly	Search multiple keywords	Medium	Fixed	Search logic improved
BG-002	Booking page validation issue	Submit empty form	Medium	Fixed	Validation added
BG-003	Property image repeated	View multiple properties	Low	Open	Can be improved using different images
BG-004	Invalid login message not clear	Login with wrong password	Low	Fixed	Improved error message
BG-005	Admin property update delay	Update property repeatedly	Low	Open	Needs optimization

Notes

- Verify that user registration and login work correctly.
- Ensure JWT authentication protects secure routes.
- Verify CRUD operations for property management.
- Confirm search functionality returns relevant properties.
- Verify property booking is stored successfully in MongoDB Atlas.
- Test the application on different browsers and screen sizes.
- Verify frontend and backend communicate correctly through REST APIs.
- Ensure all major functionalities work without errors before final submission.
